Caught this tagged walleye on April 26, 2017, at the mouth of Seven Mile canyon, close to mile marker 113. The tag number is 2917. According to Wayne the walleye was tagged on April 25th and had not moved from the original capture spot. It was caught on a worm harness close to the canyon wall near the mouth of the canyon where a 10 foot deep ledge seems to hold a school of walleye. Walleye like flats between 10 and 25 feet.

Wayne - Please have my new Ranger boat sent to Garland Gaston Dewey AZ.
